

CENTRAL COMMUNITY COLLEGE

WHEEL LOADER

HASTINGS DORMS

This project consists of replacing a 2009 CAT 914G loader used by facilities on the Hastings campuses.

The current 2009 CAT 914G wheel loader has reached its end of life. Parts are scarce or limited. We are proposing the purchase of a new John Deere loader, slightly larger and more powerful than the CAT 914G. This new loader would come equipped with a bucket mounting adaptor, allowing us to continue using our current accessories and purchase.

This unit is vital to address critical operational needs, particularly during the winter months and campus tree maintenance duties. This unit will allow continued maintenance of key areas of the campus including Technical Boulevard, Military Drive and multiple parking lots on the campus.

John Deere 344P. hi-lift wheel loader with 2-way articulating snowplow, and bucket with a branch grappler/pallet forks	\$262,196.06
Customer Discount	<u>\$59,421.18</u>
Final Cost to CCC	\$202,774.88

While the typical lead time for a new loader is 6-8 months, LandMark Implement's John Deere dealership has this loader on hand. Sourcewell pricing provides the College with a significant discount.

The College President recommends accepting this offer to purchase a CAT wheel loader and attachments from Landmark in the sum of \$202,774.88 as a replacement for the Hastings Campus.
