**Subject:** Well # 9 generator bids

On December 18th, 2025, we sent out a bid invitations to four potential bidders for a new backup electrical generator and Automatic Transfer Switch for Well #9, which currently has no back up power system. Bids were emailed to Interstate Power Systems of Lincoln, Cummins Power of Omaha, NMC Nebraska Machinery Company/ Rakes Rentals, and Nebraska Generator Service of Gretna. The bid due date was March 6,2026

Only one bidder responded, with three options asked in the bid. One for a Diesel-powered generator, a natural gas-powered generator, and a towable Diesel-powered generator.

We contacted Black Hills Energy to see if natural gas transmission mains where along Alvo Road near Well site # 9. They responded with a phone call saying that a gas main was near N 134<sup>th</sup> and Alvo Road, and it could be extended to our well site, however we would have to pay for the construction of the gas main which they said was several thousand feet away from the site and would be a substantial cost to us.

We currently have a Deisel powered generator at Well # 10/11 and an older towable unit at Well # 8. Since we received only one bid, we could rebid the project again to see if more bids arrive.

If not, the proposal from Nebraska Generator Service for an 80 KW diesel permanently mounted generator is our recommendation with automatic transfer switch for \$ 48,080 which is the lower bid for all three options.

The generator proposed is the same manufacturer that we have at the Well 10/11 site along with the towable generator, the backup generator at the shop and the wastewater plant.

A separate bid will be let for electrician services to wire the generator to the ATS and ATS to the well controls, this bid was for equipment only does not include taxes as this is for water system equipment, which is not tax exempt, Delivery time from order is expected to be 16 to 20 weeks.
